## MORE SEDIMENT RETENTION!

Milk filtration is something that can easily be taken for granted on the dairy farm, but there is more to a filter fabric than meets the eye. Schwartz Manufacturing™ is exceptional because we manufacture our own nonwoven fabrics with proprietary blends of fibers. Our unique TUFFY® nonwoven fabric is engineered specifically to provide the best milk filtration media on the market today.

TUFFY® simply means that our filters can remove more sediment from your milk, and provide you the best quality. The proof is the lack of sediment in the bottom of your bulk tank.
